

SERVICE TEST END

The Pipe Equipment range of Pressure Test Ends are used as a quick, simple and reliable method of providing a pressure testing facility in a plastic pipe without the need for additional fusion or mechanical fittings.

Service Test Ends are currently available to suit PE sizes 20, 25 and 32mm, and are suitable for use with both gas and water.

All sizes are designed to withstand an internal pressure of 16 bar.

Tests have also shown that no additional form of restraint is necessary as failure is always due to either the pipe bursting or the pressure escaping past the sealing ring. During testing Test Ends have never shown signs of losing their grip, or becoming loose within a pipe.

Special models are available for long term elevated temperature laboratory testing.

MODE OF OPERATION

Installation is simply a matter of screwing the Test End into the pipe.

No special tools are required.

MAJOR FEATURES

- Simple and quick to fit and remove
- Extremely robust
- Saves additional fitting and jointing operations
- Fully re-usable

The company follows a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
