

TOWING SOCKS

Towing Socks (Stockings), also known as Chinese Fingers, Pulling Stockings and Cable Grips can be used for any application that requires a pulling load to be applied to a cable, pipe, tube or similar object. These can be used either above or below ground, their most common use being for the installation of cables. They work on the principle 'the harder the pull, the tighter the grip'.

The Pipe Equipment range of Towing Socks consist of a wire mesh tube with an eye at one end. They are hand woven using high tensile galvanised steel wire. Each size of Towing Sock has a stated strength onto which a generous factor of safety has been applied. These strengths are regularly checked.

They are reusable and add little to the outside diameter of the object being pulled. Their use need not be restricted to circular objects.

The Single Eye version is available in a range of sizes from 4mm to 180mm. Special types are produced for smaller diameter PE pipes in sizes 16mm, 20mm, 25mm and 32mm. Other types and sizes are available upon request.

MODE OF OPERATION

The correct size of Towing Sock is simply slid over the end of the object to be pulled and a wire rope attached to the eye of the Sock.

MAJOR FEATURES

- Simple and quick to fit and remove
- Robust, reliable and lightweight
- Fully reusable
- Extensive size range from 4mm to 180mm
- Quality manufactured
- The harder the pull the tighter the grip

The company follow a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
