

SCREW-IN TOW HEAD

Pipe Equipment Specialists Ltd have recently introduced a range of Screw-in Tow Heads which are suitable for small diameter pipes and ducts.

They are designed to install polyethylene pipes and ducting using a screw-in tapered buttress thread to grip the inside wall of the pipe or duct.

They are typically used to install Innerduct or sub-duct inside a larger duct, but they may also be used for directional drilling applications. As they have no moving parts, they are both reliable and maintenance free.

The pulling eye is designed with cutting edges to cut a thread into the bore of the ducting as it is being screwed in, in much the same way as using a tap to cut a thread in steel. This helps to ensure a reliable grip.

The towing lug is designed to attach directly to a Line Swivel or other clevis type connector .

This product is manufactured from steel, and chrome plated for corrosion resistance and durability.

Three sizes are currently available which are suitable for the following range of pipe inside diameters.

MODEL	ID RANGE
32mm	23.9mm – 29.2mm
40mm	32.0mm – 36.6mm
50mm	37.6mm – 42.2mm

MAJOR FEATURES

- No Moving Parts
- Easily attached to line swivel or clevis type connector
- Maintenance Free
- Durable and corrosion resistant

Pipe Equipment also supplies Towing Heads with expanding grippers.

The company follow a policy of continuous product development and as such reserves the right to make alterations to equipment and techniques without prior notice.
