

TEST ENDS

The Pipe Equipment range of Pressure Tight Test Ends are used as a quick, simple and reliable method of providing a pressure testing facility in a plastic pipe without the need for additional fusion or mechanical fittings.

Test Ends are available for all types and sizes of plastic pipe from 16mm (½") to 630mm (24").

TEST ENDS ►

This fully re-usable product is based on the "Vick" expanding internal gripper design which works on the principle that the higher the pressure the tighter the grip. Each size is designed for one wall thickness (SDR) of a given pipe size and is suitable for use with both gas and water. All sizes are designed to withstand an internal pressure of 16 bar without any additional bracing or strutting, and smaller sizes (up to 125mm) have been found to be pressure tight to burst pressure of the pipe (47 bar).

◄ HIGH PRESSURE SERVICE TEST ENDS

This style of Test End is available to suit individual service sizes 20, 25 or 32mm and can withstand an internal pressure of 16 bar.

MULTI TEST ENDS ►

Multi Test Ends are designed as a simple solution to testing PE pipes in the size range 16mm up to 32mm. They are available in combinations of 2, 3 or 4 sizes per unit, and can withstand a test pressure of 0.25 bar. All are supplied with hose connectors for pump and pressure gauge.

◄ SERVICE TEST TEES

Designed for the pressure testing of PE services this cost effective and simple to use product offers an inexpensive alternative to the multi sized units. Available in sizes 20mm, 25mm and 32mm they are suitable for low pressure testing up to 0.25 bar, but have been tested to pressures in excess of 1 bar.

MAJOR FEATURES

- Simple and quick to fit and remove
- Quality manufactured
- Fully reusable
- Cost effective
- Corrosion resistant
- Available to suit all types and SDR's of plastic pipe
- Saves additional fittings & jointing operations
- Special models available for laboratory testing
